

SUPERSOFT URETHANE BUSHES

- Low creep rate compared to other polymers.
- Can absorb shock efficiently for millions of cycles.
- Temperature Ranges: -15°C to +98°C

The super soft urethane bushes are made of a soft visco-elastic polymer. Visco-elastic means that a material exhibits properties of both liquids (viscous solutions) and solids (elastic materials).

The super soft urethane bushes have the properties of a thermoset, polyether-based, polyurethane material. The material combines shock absorption, good memory, vibration isolation and vibration damping characteristics. In addition it is a very effective acoustic damper and absorber. While many materials exhibit one of these characteristics, it combines all of them in a stable material with a long fatigue life.

Using two bushings together or a bushing and washer(s), you can create a floating bolt that isolates the unit from any metal-to-metal contact. Different shores allow for different spring rates. Load ratings assume a 10%-20% deflection of the material. This deflection is achieved by a combination of system weight and torquing of the connecting bolts.

Do not over torque the bolts as this defeats the intended vibration and shortens the super soft urethane bush's life. Use a high quality (thread deforming) lock nut or doubled jam nuts to prevent vibration from losing the bolt.

Unlike other products the super soft urethane bushes may be used in tension connections.

Dimensional Data

Part Number	A (mm)	B (mm)	C (mm)	D (mm)	E (mm)
SB1210/1	12.7	-	4.8	5.7	-
SB1210/2	12.7	5.7	4.8	3.15	10.0
SB2520/1	25.4	-	9.6	11.4	-
SB2520/2	25.4	11.4	9.6	6.3	20.0

Part No. (combined)	Load per mount (kg)		
	30 Shore 00	50 Shore 00	70 Shore 00
SB1210/1/2	0.25 – 0.75	0.75 – 1.25	1.25 – 1.75
SB2520/1/2	2-3	3-5	5-7

Acoustic Properties: Transmission in air	-	Greater than 40^	-	dec/cm

* Reduced strength and damping up to 120C. Increased spring rate down to glass transition temperature.

** Underwriters Laboratory 94 Compatibility.

*** Modified for the effects of material tack.

^ At 50 hertz. Transmission loss increases with frequency.
